A photographer is a job highly valued on the labour market and one that offers excellent career prospects. Well-qualified specialists have the opportunity to constantly improve their skills and the job involves visiting a lot of exciting sites. What is more, photographers use advanced modern equipment these days.

Taking photographs is merely a small part of a photographer's job. They also arrange the shooting locations, edit photos, both digital and analogue, and print them at the end. Graduates who have received their professional diploma explore such areas as advertising, portrait, commemorative and documentary photography.

Photographers will find employment running their own business or working for other business entities in different sectors: advertising, media, fashion, art, wedding industry or in traditional photography studios. Being a photographer you can travel around the world and participate in various stimulating projects.

Work time and place are rather flexible and depend on the particular job position. Photographers do both indoor and outdoor shoots. They must be physically fit as the job often involves carrying around a lot of heavy equipment. Immunity to stress and the ability to work under pressure are also required. A photographer should be creative and patient and develop high interpersonal skills.

Photography technician and multimedia technician

A photography technician is a profession which requires both artistic and technical skills and as such it is highly valued by the employers. A professional diploma provides its holder with a range of employment possibilities.

A photography technician handles the process of transferring an image from a camera to a sheet with chemical or electronic methods, and then preserving it. They have a vast knowledge of recording materials, creating multimedia, graphical and online projects and arrange the shooting locations by themselves.

There are numerous employment possibilities for photography technicians such as in photography labs and studios, publishing houses, printing houses, advertising agencies, film industry, IT, photo-optical, optical, and optoelectronic industry.

Due to a distinctive character of the job, a photography technician should be precise and have a good vision and sense of aesthetics. It would be perfect if they possessed high manual and technical skills. The job involves both indoor and outdoor shoots. Systematicity, patience, and effective time management are also among the desirable skills in a photography technician.

Digital graphics and printing industry technician

A digital graphic processes technician is a profession that offers wide possibilities of finding an interesting and well-paid employment. A qualified employee will find a job both in the country and abroad.

A digital graphic processes technician handles the process of creating, printing and implementing online multimedia projects. They also operate digital production systems used in printing industry. A graduate who has received their diploma is qualified to operate modern 2D and 3D software, control the quality of graphic projects, and design websites.

A digital graphic processes technician will find employment in publishing houses, printing houses, printing studios, advertising agencies, media or in educational institutions, but also in every company that needs a visual representation of their product.

A good employee should be creative, thorough, patient, and punctual. High interpersonal skills are also desirable in a digital graphic processes technician. Due to the fast development of the IT sector, they must constantly improve their skills and broaden their horizons.
